Letter of Recommendation

August, 2026

To Whom It May Concern:

I, Windson Viana de Carvalho, Professor at the Federal University of Ceara (UFC), Ceara, Brazil, member of its Graduate Program in Computer Science (MDCC/UFC), and CNPq Research Productivity Fellow, am pleased to recommend Cecilia Lis Costa.

I have known Cecilia since her graduate studies in Computer Science at the Federal University of Ceara. She was admitted to the Master's Program in Computer Science in 2018, in the field of Information Systems. During this period, I acted as her academic advisor and followed her development through graduate coursework and research activities.

Cecilia completed the graduate coursework component of the master's program, with studies in areas directly related to networked and distributed computing, mobile and ubiquitous systems. Which included the courses directly taught by me, Distributed Systems And Communication Networks, Mobile And Wireless Networks, Mobile And Ubiquitous Computing. These subjects required both theoretical understanding and practical computational maturity, and they provided a strong technical foundation for research involving distributed, mobile, and ubiquitous systems.

In addition to her coursework, Cecilia participated in research activities related to ubiquitous computing and educational technologies. In particular, we worked in the context of the Tardigrade framework, a research effort focused on supporting the development and evaluation of ubiquitous card games. This work resulted in the peer-reviewed publication "Avaliando o Tardigrade: um framework para o desenvolvimento de jogos de cartas ubíquos", presented at the Brazilian Symposium on Ubiquitous and Pervasive Computing (SBCUP), during the Brazilian Computer Society Congress (CSBC), in 2018.

Cecilia later discontinued her enrollment in the master's program after receiving an international professional opportunity that required her relocation to Sweden. This decision was made after discussion with me and should not be understood

as a reflection of insufficient academic ability or lack of research potential. Given the circumstances at the time and the professional opportunity before her, I considered the decision reasonable and supported her choice.

Cecilia's profile combines strong software engineering experience with academic preparation in computer science research. She is able to work with complex systems, learn new technical domains, and contribute to research-oriented software projects. These qualities are especially important for graduate study, where students must combine conceptual understanding, implementation ability, and persistence in solving open-ended problems.

For these reasons, I believe Cecilia Lis Costa has the background, maturity, and technical ability to pursue further graduate studies successfully. I recommend her for admission to a master's program and believe she has the potential to contribute meaningfully to advanced academic and research work.

Please don't hesitate to contact me if you need more information about the bidder. My phone is +55-85-996122709, and my email is windson@virtual.ufc.br.

Cordially,

Windson Viana de Carvalho

Associate Professor of the UFC Virtual Institute

Federal University of Ceará - UFC

Member of the Master's and Doctorate in Computer Science (MDCC)

Collaborator of the Graduate Program in Educational Technology (PPGTE)

CNPq Research Productivity Scholarship - Level 2
